PROFILE

Full-Stack Engineer specializing in building high-stakes, large-scale architectures from the ground up. Proven ability to handle complex logic, tight constraints, and full-cycle development — from mapping step-by-step user journeys to owning feature deployment. Adept at turning difficult technical constraints into clean, functional user experiences that scale.

TECHNICAL SKILLS

Frontend	React, Next.js, Tailwind CSS, Redux Toolkit
Backend	Node.js, Express, Django, FastAPI
Databases & Caching	MongoDB, PostgreSQL, Redis
Architecture & Real-Time	Socket.io, REST APIs, Multi-tenant Architectures

PROFESSIONAL EXPERIENCE

NepGov · Full-Stack Engineer

2025 – 2026

- Designed and developed a feature-rich civic intelligence and public polling web platform with a comprehensive admin dashboard.
- Engineered a real-time survey system with complex data processing and user interactions.
- Independently managed end-to-end development: feature planning, UI/UX design, core development, debugging, and production deployment.
- Administered production deployment, server configuration, and ongoing application maintenance.

Syscomatic · Full-Stack Engineer

2022 – 2025

- Built and maintained dynamic, responsive, and user-friendly web applications in collaboration with cross-functional development teams.
- Developed complex frontend and backend features focusing heavily on performance, scalability, and code maintainability.
- Operated across the full development lifecycle: UI development, API integration, database management, and deployment.
- Contributed to large-scale projects by resolving challenging technical constraints and adapting swiftly to evolving business requirements.

NOTABLE PROJECTS

NepGov · Civic Intelligence & Polling Platform

2026

A full-stack civic data and real-time electoral analytics platform bridging citizens with transparent public discourse.

Stack: Next.js · Express · MongoDB · Redux Toolkit · Redis · Tailwind CSS · Socket.io

- Dynamic Election Hub:** Multi-election portal rendering real-time poll aggregation and interactive dashboards.
- Real-Time Survey Engine:** Modular polling engine with high concurrency and voter-verification filters to prevent bot distortion.
- Super Admin Architecture:** Granular permission systems, live survey controller, and integrated headless CMS.

MaxLive · Enterprise Admin & Fintech Platform

2024

Multi-tiered administrative and financial ecosystem for live-streaming platforms.

Stack: Next.js · Express · MongoDB · Redux Toolkit · Redis · Tailwind CSS

- Four-Tiered Admin Architecture:** Specialized panels for Super Admins, Country Admins, Agency Admins, and Resellers enforcing strict multi-tenant access control.
- Point Economy & Gamification:** Real-time tracking of point generation by content creators via live streaming performance.
- Multi-Directional Marketplace:** Custom ledger system tracking manual payout workflows, agency inventory balances, and peer-to-peer transfers.
